EDUCATION

Texas A&M University | Engineering Honors

May 2028

Bachelor of Science in Computer Science

GPA: 4.00/4.00

- **Relevant Coursework:** Data Structures and Algorithms, Computer Architecture, Computer Systems, Foundations of Software Engineering, Competitive Programming, Machine Learning, Cryptography

Dulles High School | Valedictorian (1/518) | GPA: 4.63/4.00

May 2024

EXPERIENCE

Hewlett Packard Enterprise

May 2026 – Present

Software Engineer Intern

San Jose, CA

- Achieved an **8x acceleration** in test-gap discovery, orchestrating **parallel LLM agents** to automatically analyze **25K+ uncovered lines** and **1.6K Stryker mutation cases**.
- Expanded **test coverage by 35%** to enhance the reliability and deployment safety of enterprise networking services utilized by **50K+ organizations**.
- Integrated multi-source context parsing across **Node.js** source, **Mocha** integration tests, **MongoDB**, and **Redis** to dynamically identify edge-case architecture flaws.

TAMUhack

Nov 2024 – Present

Technical Lead

College Station, TX

- Plan and develop **accessible** website experiences attracting **20K+ visitors** for one of Texas's largest student-run hackathons with **800+ attendees** powered by **Next.js**, **Astro**, **Svelte**, **React**, **GSAP**, **Framer**, and **more**
- Processed over **1K+ applications and email sending** using hacker registration system written with **Django**
- Built a pairwise-comparison judging system improving consistency across **150+ teams** utilizing **React**, **FastAPI**, **SQLAlchemy**, and **PostgreSQL**, with **Pytest** for testing and **REST API structure**

Flow

Dec 2024 – Feb 2026

Software Engineer

College Station, TX

- Led backend development of a mobile app to improve ride share experiences with **100+ drivers** on board powered by **Google Firebase**, **Google Maps API**, and **Stripe**
- Implemented an advanced AI model engineered to identify and predict high-demand hotspots for drivers' earning potential with **PyTorch**

PROJECTS

Mailgun-to-Listmonk Webhook Bridge | *Python, FastAPI, Docker, GitHub Actions, Pytest*

- Architected an asynchronous microservice with **FastAPI** to parse, verify, and translate Mailgun event payloads into Listmonk's bounce processing API structure
- Engineered a fully automated **CI/CD pipeline** using **GitHub Actions** to run rigorous type-checking, execute **Pytest** suites, and publish **Dockerized images** to the GitHub Container Registry

Presentation Coach | 2024 HowdyHack Winner | *Next.js, React, Tailwind CSS, TypeScript, Python*

- Collaborated with team through **Git** to integrate **OpenCV** in **Python** to determine audience engagement through facial recognition and **Whisper** to pull a transcript, identifying repeat and filler words, as well as words per minute}
- Built a responsive front end using **Next.js** and **Chart.js** to visually display audience retention over time, and **Flask** to store these time changes and correlate time data with audience engagement

SKILLS

Languages: C++, Python, TypeScript, HTML/CSS, JavaScript, Go (Golang), Rust, Java, SQL

Frameworks & Libraries: React, TailwindCSS, FastAPI, GSAP, PyTorch, Django, Next.js, Framer Motion, Zustand, Prisma (ORM), Flask, Node.js, Svelte, Vue.js

Tools & Infrastructure: Git, GitHub, GitHub Actions, PostgreSQL, Firebase, RESTful APIs, Docker, Railway, Vercel, Microservices Architecture, AWS (S3, Lambda), SQLite, WebSockets, Google Cloud Platform (GCP)
