EDUCATION

Texas A&M University | Engineering Honors

Bachelor of Science in Computer Science

May 2028

GPA: 4.00/4.00

- **Relevant Coursework:** Data Structures and Algorithms, Computer Architecture, Computer Systems, Foundations of Software Engineering, Competitive Programming, Machine Learning, Cryptography

Dulles High School | Valedictorian (1/518) | GPA: 4.63/4.00

May 2024

EXPERIENCE

Hewlett Packard Enterprise

Software Engineer Intern

May 2026 – Aug 2026

San Jose, CA

- Accelerated test discovery **8x**, parallelizing **LLM agents** to expose untested edge cases across **25K+ lines**.
- Engineered pipelines to resolve **1.6K Stryker mutations**, enforcing deterministic validation via **Mocha** and **c8**.
- Injected AI tests covering **600+ new lines**, applying serial validation to block **Redis/MongoDB** state pollution.
- Orchestrated **PR workflows**, mitigating CI/CD bottlenecks to safely scale AI test generation across the monolith.

TAMUhack

Technical Lead

Nov 2024 – Present

College Station, TX

- Optimized **Next.js/Astro** render performance by **50%** for **20K+ users** via **GPU-compositing** and **SVG culling**.
- Scaled **Django** dispatch for **1K+ applicants**, decoupling synchronous email tasks via **async worker queues**.
- Hardened help-desk APIs via **HMAC-SHA256** signatures and strict timestamp validation blocking **replay attacks**.
- Architected a pairwise judging platform in **FastAPI** and **PostgreSQL**, standardizing evaluation for **150+ teams**.

Flow

Software Engineer

Dec 2024 – Feb 2026

College Station, TX

- Deployed geospatial ride-matching via **geohashing**, ranking and routing sequential offers for **100+ drivers**.
- Integrated a **Stripe Connect** payment pipeline, leveraging manual capture auth and scheduled weekly cron payouts.
- Provisioned event-driven **Cloud Functions** via **Firestore** triggers to chunk and dispatch **Expo** push alerts.
- Trained **PyTorch** predictive models to map high-demand geographic hotspots, optimizing driver routing margins.

PROJECTS

Mailgun-to-Listmonk Webhook Bridge | Python, FastAPI, Docker, uv

- Developed a **FastAPI** bridge translating **Mailgun** events to **Listmonk** APIs, resolving an open-source gap.
- Secured the webhook pipeline via **HMAC-SHA256** signature verification and custom headers to drop spoofed data.
- Enforced **100% test coverage** in **pytest**, utilizing **Pydantic** schemas to strictly validate JSON transformations.
- Published a production **GHCR Docker** image, enforcing strict typing and linting via **uv**, **Pyright**, and **Ruff**.

Presentation Coach | 2024 HowdyHack Winner | Next.js, Tailwind CSS, Flask, OpenCV, Whisper AI

- Constructed a computer vision pipeline via **OpenCV Haar cascades** to quantify audience eye-contact and retention.
- Processed local media inputs via **FFmpeg** and **OpenAI Whisper** to transcribe speech and extract temporal data.
- Parsed presentation **XML**, utilizing **NLTK** and fuzzy text matching to auto-sync speech to slide transitions.
- Rendered real-time analytics dashboards via **Next.js** and **Chart.js**, streaming multi-metric speaker feedback.

SKILLS

Languages: C++, Python, TypeScript, HTML/CSS, JavaScript, Rust, Java, SQL

Frameworks & Libraries: React, TailwindCSS, FastAPI, GSAP, PyTorch, Django, Next.js, Prisma

Tools & Infrastructure: Git, GitHub, GitHub Actions, PostgreSQL, Firebase, RESTful APIs, Docker, Railway, Vercel, Microservices Architecture, AWS (S3, Lambda), SQLite, WebSockets, Google Cloud Platform (GCP)
